

Thermosoft's Advanced Floor Heaters Promise Comfort, Durability & Savings

Thermosoft International Corporation introduced its FiberThermics® technology to the tile floor heating market with a new, electronic, floor heating system that is easy-to-install, safe and durable. Do-it-yourselfers and professional installers will appreciate the simplicity and commercial grade quality of this radiant floor heating mat. Thermosoft's tile floor heaters are installed in a thin layer of cement before laying the tile and connected to a variety of available thermostats for maximum energy savings. Thermosoft's floor warming mats are listed by Underwriter's Laboratories (UL) and marketed under the WarmWalk™ and ThermoTile® brand names.

WarmWalk electric radiant floor heating for all types of tile floors

Russ Dunn, Vice President of Marketing for Thermosoft stated, " Anyone who has experienced the shock of stepping onto a cold bathroom floor in the morning will appreciate this new product. Thermosoft's market entry leverages our fully integrated U.S. manufacturing base and the latest worldwide advancements in electric radiant heating technology. Our goal is to make underfloor heating, which was once considered a luxury, more widely available to homeowners. We offer low prices and a lifetime warranty to back up our product's superior position."

FiberThermics is the trade name for Thermosoft's new generation of textile-based heaters. The patented and patent-pending heaters conduct electricity through textile fibers and special alloys specifically designed for heating. What makes FiberThermics unique is its innate thermal cut-off capability that assures homeowners of maximum durability and safety.

Thermosoft International Corporation, headquartered in Buffalo Grove, Illinois, USA, was incorporated in 1996 to commercialize FiberThermics heating technology for application to a wide variety of consumer and commercial warming products in the household, automotive, healthcare and industrial markets.
