

ThermoSoft's New Floor Warming System Installs Easily Without Cement and Saves Energy

3-in-1 system heats, insulates & quiets floors!

ThermoSoft® now offers ThermoFloor™ direct.

ThermoSoft International Corporation, a market leading manufacturer of electric warm floors, now offers a revolutionary floor warming system for floating laminate and engineered wood floors directly to consumers and installers. Where most traditional floor warming systems must be imbedded in cement, this new system, marketed under the brand name ThermoFloor™, installs directly under laminate, wood and engineered wood floors without cement.

ThermoFloor is made in the USA with FIBERTHERMICS®, the safest and most advanced heating technology available. Like fiber-optics conducts light through fibers, FIBERTHERMICS conducts electricity through temperature self-limiting fibers to create the safest, healthiest heat that can be installed with peace of mind directly under combustible laminate and wood floors.

ThermoFloor replaces the generic foam pads that are normally laid under floating floors. The extremely easy installation involves rolling out the ThermoFloor heating pads, routing the factory-attached lead wires to power, duct-taping the seams and laying the finished floor. No special tools, splice connections or transformers are required. There is simply no easier way to achieve a warm floor than with ThermoFloor.

ThermoFloor is a multi-purpose product that not only heats the floor, it's upgraded underlayment pad insulates cold subfloors and quiets floor noise from being heard in lower levels. What's more, ThermoFloor is mold and mildew resistant and it wicks incidental spills and moisture to the floor perimeter where it evaporates.

Energy-saving programmable thermostats complete the system and help ThermoFloor achieve up to 40% energy savings compared to conventional gas forced-air heating systems. ThermoFloor operates on standard household voltage. Both 110/120 Volt and 220/240 Volt systems are available.

More information about ThermoFloor radiant floor heating can be found on the World Wide Web at www.thermosoft.com.

ThermoSoft International Corporation is a leading USA manufacturer of UL and ETL listed electric radiant floor heating systems for all types of floors. ThermoSoft offers factory-direct prices, same day shipping and lifetime technical support. Incorporated in 1996, ThermoSoft is headquartered in the Chicago area suburb of Buffalo Grove, Illinois.
